

P. 104 # 15

Ojo: Por cuestión de espacio he colocado dos signos de igualdad en la misma fila.

15a)

$$+ 1,8 - (-2) = 3,8$$

$$+ 1,8 - (+1,4) = 0,4$$

$$+ 1,8 - \left(-\frac{5}{6}\right) = \frac{39}{30} = 2\frac{19}{30}$$

$$+ 1,8 - \left(-2\frac{1}{3}\right) = \frac{62}{15} = 4\frac{2}{15}$$

$$-\frac{2}{3} - (-2) = \frac{4}{3} = 1\frac{1}{3}$$

$$-\frac{2}{3} - (+1,4) = -\frac{31}{15} = -2\frac{1}{15}$$

$$-\frac{2}{3} - \left(-\frac{5}{6}\right) = \frac{1}{6}$$

$$-\frac{2}{3} - \left(-2\frac{1}{3}\right) = \frac{5}{3} = 1\frac{2}{3}$$

$$+ 1\frac{1}{2} - (-2) = \frac{7}{2} = 3\frac{1}{2}$$

$$+ 1\frac{1}{2} - (+1,4) = \frac{1}{10}$$

$$+ 1\frac{1}{2} - \left(-\frac{5}{6}\right) = \frac{7}{3} = 2\frac{1}{3}$$

$$+ 1\frac{1}{2} - \left(-2\frac{1}{3}\right) = \frac{23}{6} = 3\frac{5}{6}$$
